

# Total Productive Maintenance (TPM)

Total Productive Maintenance or TPM is a structured programme to improve the effective performance of a process or equipment.

Overall Equipment Effectiveness (OEE) of a process is measured and key losses displayed focussing all activities on key areas of opportunity.

Optimal operating conditions are established and maintained while upskilling and engaging the entire workforce through 8 pillars of activity with a supporting and fully integrated organisational structure.

Aspen Global has a well-defined process to implement TPM through the disciplined stages required for success.

Our highly experienced experts are trained by the Japanese Institute of Preventative Maintenance (JIPM) the official awarding body and have supported many companies on their TPM journey.
